

ATTENDEE SPOTLIGHT

Erik Norden

AI Platform Architect

MEMCON

WHAT ARE YOU MOST LOOKING FORWARD TO ABOUT ATTENDING MEMCON 2024?

- I am looking forward to advancing my understanding of technology trends and potential breakthroughs for large ML model training and deployment. And to meet more experts in this domain.

TELL US ABOUT YOUR ROLE AND HOW ATTENDING MEMCON 2024 WILL SUPPORT THIS?

- I am looking at advancing AI with a focus on efficiency during training and deployment. More efficient memory technology would help here and might have an impact on workloads.

WHAT ARE YOUR THOUGHTS ABOUT THE WAY THE INDUSTRY IS EVOLVING?

- At the end of Moore's Law, it's important to look across fields such as silicon, system (HW/SW), algorithm evolution, use cases, training methods, and co-design of all. I think the biggest changes will be in the use case workload itself and its structure.
